11. Quick Reference: Rate Tables & Converters

Chapter 1: Why Freelancers Undercharge (And How to Stop)

There's a dirty secret in freelancing: most of us charge too little.

Not by a little. By a lot.

The average freelancer sets their rate based on one of three broken methods:

- **The Employee Divide:** "I made $60K as an employee, so... maybe $30/hr?"
- **The Competitor Glance:** "That person on Upwork charges $45, so I'll do $40"
- **The Gut Feel:** "I just don't want to seem greedy"

None of these methods has anything to do with what you actually need to earn, what your work is worth, or what the market will bear.

The Real Cost of Undercharging

When you charge too little, you don't just lose money. You:

- **Work more hours** to hit the same income target
- **Attract worse clients** (high rates filter out bad buyers)
- **Burn out faster** (resentment builds when you're underpaid)
- **Signal low quality** (price is often a proxy for value)
- **Have no buffer** for slow months, taxes, or growth

The goal of this guide is simple: give you the actual math and actual scripts to charge what you're worth — and keep the clients who are worth keeping.

Chapter 2: The Real Math — What You Actually Need to Earn

As a freelancer, your rate isn't just your "salary." It needs to cover everything an employer would normally cover.

The Freelancer Tax

When you work for yourself, you pay:

- **Self-employment tax:** ~15.3% on top of income tax
- **Health insurance:** $300–600+/month (not covered by employer)
- **Retirement:** You fund it yourself (15%+ recommended)
- **Equipment and software:** Amortized across years
- **Unpaid time:** Administrative, sales, marketing, sick days
- **Slow months:** Typically 2–3 months/year of reduced income
- **Business expenses:** Tools, subscriptions, professional development

The Utilization Problem

Most freelancers think: "I'll work 40 hours/week × 50 weeks = 2,000 billable hours."

Wrong.

Reality: You only **bill** 50–60% of the time you work. The rest is:

- Email and admin (10–15%)
- Sales and proposals (10–15%)
- Marketing and networking (5–10%)
- Downtime between projects (10–20%)

So if you want to bill 40 hours/week, you need to work ~70 hours/week.

More realistic: **Plan for 1,000–1,200 billable hours/year.**

The Rate Formula

```
Annual Income Target = Desired Take-Home + Taxes (30%) + Benefits
                     + Business Expenses

Target Hourly Rate = Annual Income Target ÷ Billable Hours
```

Example Calculation:

Item	Amount
Desired take-home	$80,000
Taxes (30%)	$34,286
Health insurance	$6,000/year
Retirement (15%)	$17,143
Business expenses	$5,000
Total needed	**~$142,429**
Billable hours (1,100/yr)	1,100
Required rate	**~$129/hour**

If you're a mid-level freelancer charging $75/hour thinking you're "doing well," you're actually underpaying yourself by $54/hour.

Chapter 3: Rate Tables by Niche (2025–2026 Benchmarks)

These are **real market rates** based on Upwork, Toptal, Contra, and LinkedIn data — what experienced freelancers in each niche actually earn.

Web Development

Role	Entry (0–2yr)	Mid (3–5yr)	Senior (6+yr)	Specialist
Frontend (React/Vue)	$60–80/hr	$90–120/hr	$130–175/hr	$150–200/hr
Backend (Node/Python)	$65–85/hr	$95–130/hr	$140–185/hr	$160–220/hr
Full Stack	$70–95/hr	$110–145/hr	$150–200/hr	$175–250/hr
WordPress Developer	$40–65/hr	$70–95/hr	$100–140/hr	$120–160/hr
Shopify Developer	$50–75/hr	$85–115/hr	$125–165/hr	$140–190/hr
Mobile (iOS/Android)	$75–100/hr	$110–150/hr	$160–210/hr	$190–260/hr

Design

Role	Entry	Mid	Senior	Specialist
UI/UX Designer	$55–75/hr	$85–115/hr	$125–175/hr	$150–220/hr
Brand Identity	$60–85/hr	$95–130/hr	$140–190/hr	$175–250/hr
Graphic Designer	$35–55/hr	$60–90/hr	$95–130/hr	$110–160/hr
Motion Graphics	$55–80/hr	$90–120/hr	$130–175/hr	$150–200/hr
Product Designer	$75–100/hr	$120–160/hr	$170–220/hr	$200–280/hr

Writing & Content

Role	Entry	Mid	Senior	Specialist
Copywriter	$40–65/hr	$75–110/hr	$120–175/hr	$150–225/hr
Content Writer	$25–45/hr	$50–80/hr	$85–120/hr	$100–150/hr
Technical Writer	$50–70/hr	$80–110/hr	$120–160/hr	$145–190/hr
SEO Content	$35–55/hr	$60–90/hr	$95–135/hr	$115–160/hr
Email Copywriter	$50–75/hr	$90–130/hr	$145–200/hr	$175–275/hr

Marketing & Strategy

Role	Entry	Mid	Senior	Specialist
Social Media Manager	$30–50/hr	$55–85/hr	$90–130/hr	$110–160/hr
Paid Ads (Google/FB)	$50–75/hr	$85–125/hr	$135–185/hr	$160–240/hr
SEO Consultant	$55–80/hr	$90–130/hr	$140–200/hr	$175–275/hr
Marketing Strategist	$65–90/hr	$100–150/hr	$160–225/hr	$200–300/hr
Email Marketing	$45–70/hr	$80–115/hr	$125–175/hr	$150–220/hr

Consulting & Strategy

Role	Entry	Mid	Senior	Specialist
Business Consultant	$75–110/hr	$120–175/hr	$185–275/hr	$250–400/hr
Financial Consultant	$80–120/hr	$130–185/hr	$200–300/hr	$275–450/hr
HR Consultant	$65–95/hr	$105–150/hr	$160–230/hr	$200–320/hr
Operations Consultant	$70–100/hr	$110–160/hr	$175–250/hr	$225–375/hr

Project-Based Rate Equivalents

Multiply your hourly rate × estimated hours × 1.3 (scope buffer):

Project	Hours Estimate	Mid-Level Cost
Brand identity (logo + guidelines)	15–25hr	$1,500–3,000
5-page website (design + dev)	40–80hr	$4,500–9,000
Full e-commerce site	80–160hr	$9,000–20,000
10-email sequence	8–15hr	$750–1,600
SEO audit + strategy	10–20hr	$1,000–2,500
Mobile app MVP	200–400hr	$22,000–56,000

Chapter 4: Your Minimum Viable Rate

Your **MVR** is the floor — the number below which you're actually losing money.

Step 1: Calculate Your Annual Target

Item	Your Number
Desired annual take-home	$_____
Add 30% for taxes	$_____
Add health insurance (~$5,500/yr avg)	$_____
Add retirement (15% of income)	$_____
Add business expenses ($3,000–8,000/yr)	$_____
TOTAL ANNUAL REVENUE NEEDED	**$_____**

Step 2: Calculate Realistic Billable Hours

Item	Your Number
Weeks per year you'll work (recommend: 47 max)	___
Billable hours per week (recommend: 20–25 realistic)	___
ANNUAL BILLABLE HOURS	___

Step 3: Your MVR

```
Annual Revenue Needed ÷ Annual Billable Hours = YOUR MVR

$__________  ÷  _________ hours = $______/hr  ← Your MVR
```

Your target rate should be 20–30% above your MVR — leaving room for negotiation, slow months, and unexpected costs.

Chapter 5: Pricing Strategies — Hourly vs. Project vs. Retainer

Not all projects should be billed the same way.

Hourly Billing

Best for: Open-ended projects, maintenance work, ongoing support

Pros: You're paid for every hour; scope creep isn't your problem

Cons: Income is capped; clients watch the clock

> **Tip:** If billing hourly, track every 15 minutes and invoice weekly. Never let a bill exceed $2,000 without a check-in.

Project-Based Billing

Best for: Defined deliverables (logo, website, campaign)

Pros: Reward efficiency; can earn more than hourly if you work fast

Cons: Scope creep will kill you if not managed

Key: Always split payments: **50% upfront, 50% on delivery.** Never start without a deposit.

Scope protection clause to use in every proposal:

> "This proposal covers [specific deliverables]. Revisions are limited to 2 rounds. Work beyond this scope is billed at $X/hour."

Retainer Billing

Best for: Ongoing relationships (monthly content, fractional CMO, ongoing dev support)

Pros: Predictable income; clients feel ownership; lower sales overhead

Cons: Can feel like an employee; requires clear scope

Structure retainers as:

- X hours/month at your hourly rate (with rollover policy)
- Or: defined deliverables per month (e.g., 4 blog posts, 2 campaigns)

Retainer sweet spot: 3–5 retainer clients at $2,000–5,000/month each = $6,000–25,000 MRR without new client sales.

Chapter 6: How to Raise Your Rates Without Losing Clients

The rule: **You will lose some clients when you raise rates. That's the point.**

The clients who leave when you raise rates are the clients who were costing you more than they were worth — in time, energy, and opportunity cost.

When to Raise Rates

- After completing a successful project (momentum)
- At the start of a new year (natural reset)
- When you're at 80%+ utilization (demand is high)
- When you get a better offer (use it as validation)
- When you've learned a high-value skill

How Much to Raise

- **New clients:** Raise immediately (no awkwardness)
- **Existing clients:** 15–25% at a time, with 60 days notice
- **Premium move:** Jump rates significantly with a "grandfathered" tier offer

The Rate Increase Letter

```
Subject: Rate Update for [Month/Year]

Hi [Name],

I've really valued our work together on [project/relationship].

I'm writing to let you know that my rates are increasing to
$[NEW RATE] effective [DATE — at least 60 days out].

For current clients, I'm honoring existing projects at current
rates through [end date]. New work starting after [date] will
be at the updated rate.
```

```
I'd love to continue working together. Want to schedule a
quick call to discuss what's coming up?

[Your name]
```

Tiering Your Rates

Once you raise rates, offer a "good/better/best" structure:

Tier	Rate	When to Use
Standard	Your new rate	Normal projects
Rush	1.5× your rate	<72hr turnaround
Retainer	Your rate – 10%	Long-term commitment
Equity	Lower rate + % revenue	High-conviction bets only

Chapter 7: Scripts — Saying the Number Out Loud

The moment of saying your rate to a client is where most freelancers lose money.

Script 1: First Inquiry (Email)

> "Based on what you've described, a project like this typically runs $X,XXX–X,XXX. That covers [brief scope]. Happy to jump on a call to nail down specifics and give you a firm number."

Why it works: You gave a range (anchors high), tied it to deliverables, and opened the door without committing.

Script 2: The Live Reveal

When asked "What do you charge?" on a call:

> "For work like this, I'm at $[RATE]. Does that fit your budget?"

Then **stop talking.** The next person to speak loses in rate negotiations. Say the number. Then wait.

Script 3: When They Ask for a Discount

> "I keep my rates consistent for everyone — it's how I stay fair to all my clients. What I can do is adjust the scope to fit your budget. What's most important to you here?"

You're not negotiating on price — you're negotiating on scope.

Script 4: The "We're Just a Startup" Move

> "I understand budgets are tight early on. I do offer an equity-for-rate arrangement in some cases, but that's case-by-case. For cash projects, my rate is $[RATE]. I'd love to find a scope that works."

Script 5: The Multi-Client / Referral Discount Ask

> "For referrals or bundled projects, I can sometimes offer a package rate. But my base rate is $[RATE] — and I find that clients who value the work rarely haggle."

Chapter 8: Handling "That's Too Expensive" Without Caving

"That's too expensive" is not a rejection. It's the beginning of a negotiation. Or it's a filter — and they're filtering themselves out.

The 3 Responses

Response 1: Reframe Value

> "I get that it feels like a lot upfront. What I find is that clients who invest in quality work typically see [outcome] — which is why they come back. What's the cost to you of this not being done right?"

Response 2: Adjust Scope (Not Rate)

> "That rate is locked in — but we could scale back the scope. If budget is $X, here's what I'd deliver for that. Want to see a revised proposal?"

Response 3: Graceful Pass

> "I appreciate you being upfront. I don't think I'm the right fit at that budget, but I'd be happy to refer you to someone who might be. Good luck with the project."

Walking away from a bad-fit client is a skill. Every bad-fit client you say no to frees up time to find a great one.

Chapter 9: Red Flags — Clients Who Will Always Lowball You

Save yourself time and heartache. Learn to spot these early.

🚩 The "Portfolio Opportunity" Client

> "This would be great exposure for you."

Exposure doesn't pay rent. If the work isn't paid, it's charity — decide if you want to donate your time, but don't be tricked into it.

🚩 The "We Have Budget for Phase 2" Client

They underpay now and promise a bigger engagement later. Phase 2 never materializes. Get paid fairly now or don't start.

🚩 The "My Last Freelancer Did It for $X" Client

Their last freelancer may have been underpaid, delivered bad work, or not existed. What someone else charged is irrelevant. What you charge is what it costs to get you.

🚩 The Scope-Creep Requester

They approve a project, then casually ask "while you're in there, can you also..." every week. Document everything. Charge for extras.

🚩 The Urgency Manipulator

> "We need this by tomorrow, but we need to keep the price the same."

Rush work costs more. Always. Your rush rate is at least 1.5× normal.

Chapter 10: Building Toward Premium Rates

Getting to $150+/hour isn't magic — it's a series of deliberate moves.

The Premium Ladder

Level	Rate Range	How You Get There
Level 1: Generalist	$40–70/hr	You do everything. You compete on price.
Level 2: Specialist	$70–110/hr	You do one thing well. "I'm a React developer."
Level 3: Expert	$110–175/hr	Case studies. ROI proof. Clients seek you out.
Level 4: Authority	$175–300+/hr	You speak, write, publish. You have a brand.

Moving Up the Ladder

1. **Pick a niche and commit** — "I help B2B SaaS companies with product copy" is infinitely more powerful than "I write stuff"
2. **Document everything** — Case studies, before/afters, metrics. "Increased conversion 34%" beats "I did copywriting"
3. **Build a minimum viable audience** — Even 500 Twitter followers or a small newsletter changes the power dynamic
4. **Raise prices with every new client** — Each new client is a fresh start. No reason to quote last year's rate
5. **Say no to bad-fit work** — Every "yes" to underpaid work is a "no" to finding well-paid work

The $10K/Month Formula

Option	How It Works

Hourly	$100/hr × 100 hrs/month = $10,000 (25 hrs/week billable)
Project-based	2 projects at $5,000 each — or 4 at $2,500
Retainer-first	3 clients at $3,333/month = predictable $10K

The math isn't hard. The psychology is. You have to believe your work is worth it — and then act like it.

Final Words: The Number Is Not the Problem

The real reason freelancers undercharge isn't math. It's fear.

Fear of rejection. Fear of seeming greedy. Fear that if you charge more, they'll say no — and that will mean something about your worth.

Here's the truth: Clients who are right for you won't flinch at your real rate. They'll say yes, because they understand that good work costs money, and cheap work costs more in the long run.

The freelancers earning $200K+ aren't more talented than you. They just decided — sometime, somewhere — to say the number without apologizing for it.

You can make that decision today.

FreelanceRateIQ.com — Know your worth. Charge it.

Quick Reference: Rate Tables & Converters

"Am I Charging Enough?" Sanity Check

Your Rate	Annual at 1,100 hrs	Take-Home (after 30% tax)
$50/hr	$55,000	~$38,500
$75/hr	$82,500	~$57,750
$100/hr	$110,000	~$77,000
$125/hr	$137,500	~$96,250
$150/hr	$165,000	~$115,500
$200/hr	$220,000	~$154,000
$250/hr	$275,000	~$192,500

Take-home is illustrative; actual tax varies by state, deductions, and filing status.

Annual Income to Hourly Rate Converter

If You Want To Earn	Your Rate Should Be (at 1,100 hrs)
$60,000	$72/hr
$80,000	$96/hr
$100,000	$121/hr
$120,000	$145/hr
$150,000	$182/hr
$200,000	$242/hr

Freelancer's Monthly Income Snapshot

Monthly Goal	Weekly Billable Hrs (at $100/hr)	Weekly Billable Hrs (at $150/hr)
$5,000/month	12.5 hrs/wk	8.5 hrs/wk
$7,500/month	18.75 hrs/wk	12.5 hrs/wk
$10,000/month	25 hrs/wk	16.7 hrs/wk
$15,000/month	37.5 hrs/wk	25 hrs/wk
